Assignment – 4

Q1) Write an SQL query to display employee first_name and last_name with suitable column aliases.

-- select first_name as fname, last_name as lname from employee;

Q2) Write an SQL query to display all different department IDs available in the EMPLOYEES table.

-- select distinct dept_id from employee;

Q3) Write an SQL query to display all employee details sorted by first_name in descending order.

-- select * from employee

-> order by first_name desc;

Q4) Write an SQL query to display first_name, last_name, salary, and PF for all employees. (PF is calculated as 15% of salary.)

-- select first_name, last_name, salary, salary * 0.15 as PF from employee;

Q5) Write an SQL query to display employee_id, employee names, and salary sorted in increasing order of salary.

-- select employee_id, first_name as 'Employee Name', salary from employee

-> order by salary asc;

Q6) Write an SQL query to display the total salary payable to all employees.

-- select sum(salary) as 'Total Salary' from employee;

Q7) Write an SQL query to display the highest salary and the lowest salary from the EMPLOYEES table.

-- select max(salary) as 'Highest Salary', min(salary) as 'Lowest Salary' from employee;

Q8) Write an SQL query to display the average salary and the total number of employees.

-- select avg(salary), count(employee_id) from employee;

Q9) Write an SQL query to display the total number of employees working in the company.

-- select count(employee_id) from employee;

Q10) Write an SQL query to display the number of different job roles available in the EMPLOYEES table.

-- select count(distinct job_id) from employee;

Q11) Write an SQL query to display the first 10 employee records from the EMPLOYEES table.

-- select * from employee limit 10;

Q12) Write an SQL query to display employee names and salary for employees whose salary is less than 10000 or greater than 15000.

-- select first_name, last_name, salary from employee

-> where salary < 10000 or salary > 15000;

Q13) Write an SQL query to display employee names and department_id for employees working in department 30 and department 100.

Sort the result by departmen

-- select first_name, dept_id from employee

-> where dept_id in(30,100)

-> order by dept_id;

Q14) Write an SQL query to display employee names and salary for employees working in department 30 or 100,

whose salary is outside the range 10000 to 15000

-- select first_name, salary from employee

-> where dept_id in(10,60) and (salary<10000 or salary>15000);

Q15) Write an SQL query to display employee names and hire_date for employees who were hired in the year 1987.

-- select name, hire_date

-> from employee

-> where year(hire_date)=1987;

Q16) Write an SQL query to display first_name of employees whose first_name contains both letters 'b' and 'c'.

-- select first_name from employee

-> where first_name like "%l%" or first_name like "%d%";

Q17) Write an SQL query to display last_name, job role, and salary for employees who work as Programmer or Shipping Clerk,

and whose salary is not equal to 4500, 10000, or 15000.

-- select d.dept_name, e.last_name, e.salary

-> from employee as e inner join department as d

-> on e.dept_id=d.dept_id

-> where salary not in(4500,10000,15000);

Q18) Write an SQL query to display last_name of employees who’s last_name contains exactly 6 characters.

-- select last_name from employee

-> where length(last_name)=6;

Q19) Write an SQL query to display last_name of employees having 'e' as the third character in their last_name.

-- select last_name from employee

-> where last_name like "__e%";

Q20) Write an SQL query to display all different job roles/designations available in the EMPLOYEES table.

-- select distinct d.dept_name from employee as e

-> inner join department as d

-> on e.dept_id=d.dept_id;

Q21) Write an SQL query to display employee details for employees who's last_name is BLAKE, SCOTT, KING, or FORD.

-- SELECT *

-> FROM employee

-> WHERE last_name IN ('BLAKE', 'SCOTT', 'KING', 'FORD');
